

MKS Inc. is pleased to announce the immediate availability Patch 2 for MKS Toolkit 9.2 and Patch 1 MKS X/Server 8.5.

MKS Toolkit 9.2 Patch 2 is a maintenance update for MKS Toolkit 9.2. It includes all fixes provided in MKS Toolkit 9.2 Patch 1 as well as those listed in the link below.

For a complete description of the fixes and new features included in this update, please see http://www.mkssoftware.com/docs/rn/relnotes_tk92p2.asp

MKS X/Server 8.5. Patch 1 is a maintenance update for MKS X/Server 8.5. For a list of the fixes included, see the link below. Additionally MKS X/Server 8.5 Patch 1 includes the following new features:

- MKS X/Server now supports overlay planes on systems with video cards that support that feature (for examples, cards that use the NVIDIA Quadro FX or ATI FireGL chipsets).
- MKS X/Server now supports compressed fonts (that is, .pcf.gz files). Such fonts can be used exactly like uncompressed fonts (that is, .pcf files). X/Servers on Linux systems commonly use compressed fonts and this support allows these Linux system fonts to be easily moved and used with MKS X/Server.

For a complete description of the fixes and new features included in this update, please see http://www.mkssoftware.com/docs/rn/relnotes_mksx85p1.asp

Customers with a current PCS contract and who are running MKS Toolkit 9.2 or MKS X/Server 8.5 can immediately download the patches using <http://www.mkssoftware.com/support/patches.asp>

Customers with a current PCS contract and who are running earlier supported versions of the products, may request their free upgrades using the following site: <http://www.mkssoftware.com/support/upgradeform.asp>
